圆桌讨论: 为人工智能助力可持续未来铺平道路

- 陈成强(Richard Tan)(主持人)
- President of Greater China, Apexe Global Inc.

Richard Tan is the President of Greater China for Apexe Global; whose mission is to help its portfolio scaleups go global. Its highly effective globalization programme has empowered 18 IPOs and nurtured 26 unicorns worldwide. Many local governments and large corporates around the world are engaging Apexe Global to help build up and strengthen its startup ecosystems as well as to meaningfully work with tech companies. Mr Tan's main motivation in setting up Apexe Global stemmed from his prior experiences in founding and building up InnoSpace into one of China's most effective innovation platforms. InnoSpace had hailed 6 unicorns and had created 13 star ventures whose valuation exceeded Rmb100mn within 12 months of their inception. Its 1st investment fund also enjoyed a DPI of 1.1; making it China's top 20% best performing angel investor. However, despite such track records, Mr Tan had recognized that for startup ecosystems as well as corporate's open innovation programmes to be sustainable and scalable, a strong engagement and nurturing of quality scaleups (Series A to C) would be critical. Thus, he founded Apexe Global in China; seeking to help upgrade China's startup scene and bring its portfolio scaleups into China.

Prior to setting up Apexe Global and InnoSpace, Mr Tan was the General Manager for Hong Kong listed developer, Shui On Group. His charter then was to formulate and help champion Shui On's technology-play strategy with an alignment to its real estate business. Mr Tan was successfully in

building up a vibrant and robust industry ecosystem for Shui On's Knowledge & Innovation Community project (KIC), which effectively enabled the project to achieve full occupancy (at high rental) within 12 months of building up the ecosystem.

Before coming to China, Mr Tan was the Vice Consul for the Singapore Consulate in Mumbai, India. He was double-heading as the Regional Director for the Singapore Economic Development Board. He was also involved in the Singapore-China Suzhou Industrial Park and Singapore-India IT Park Bangalore.
